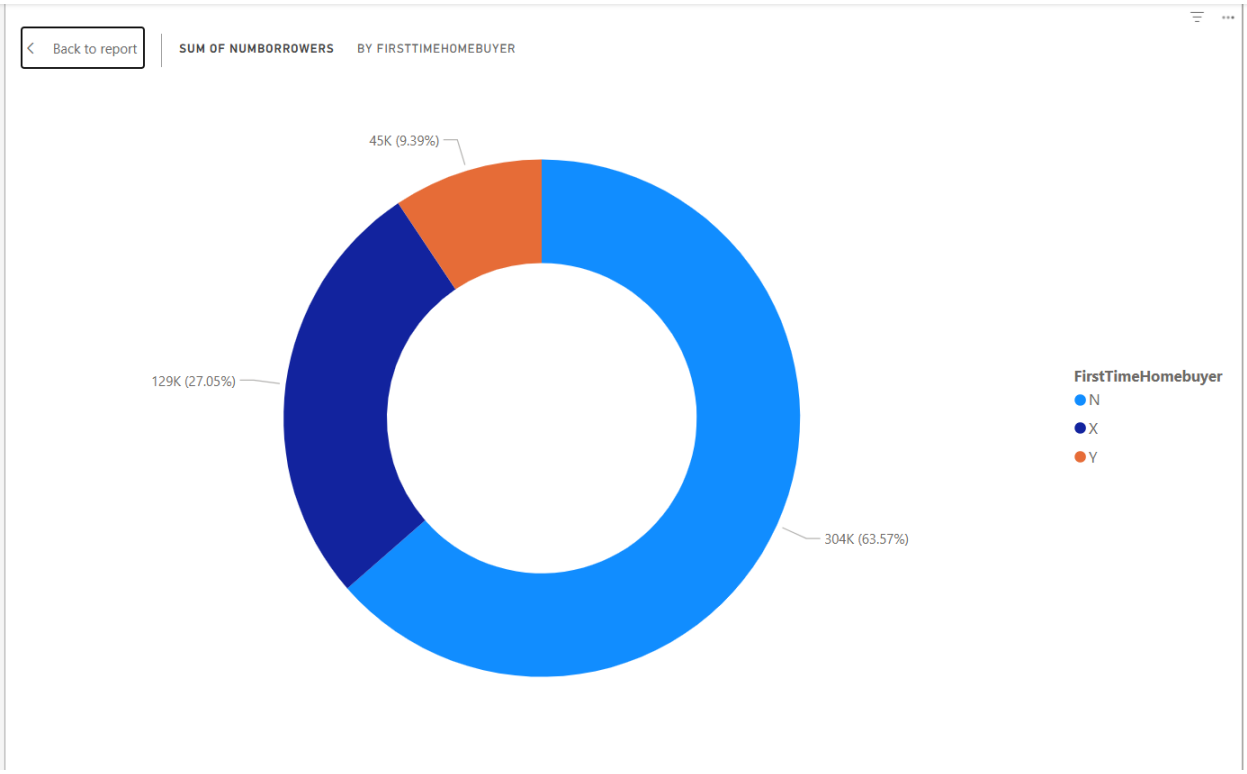
Borrower Demographics & Behavioral Insights

---

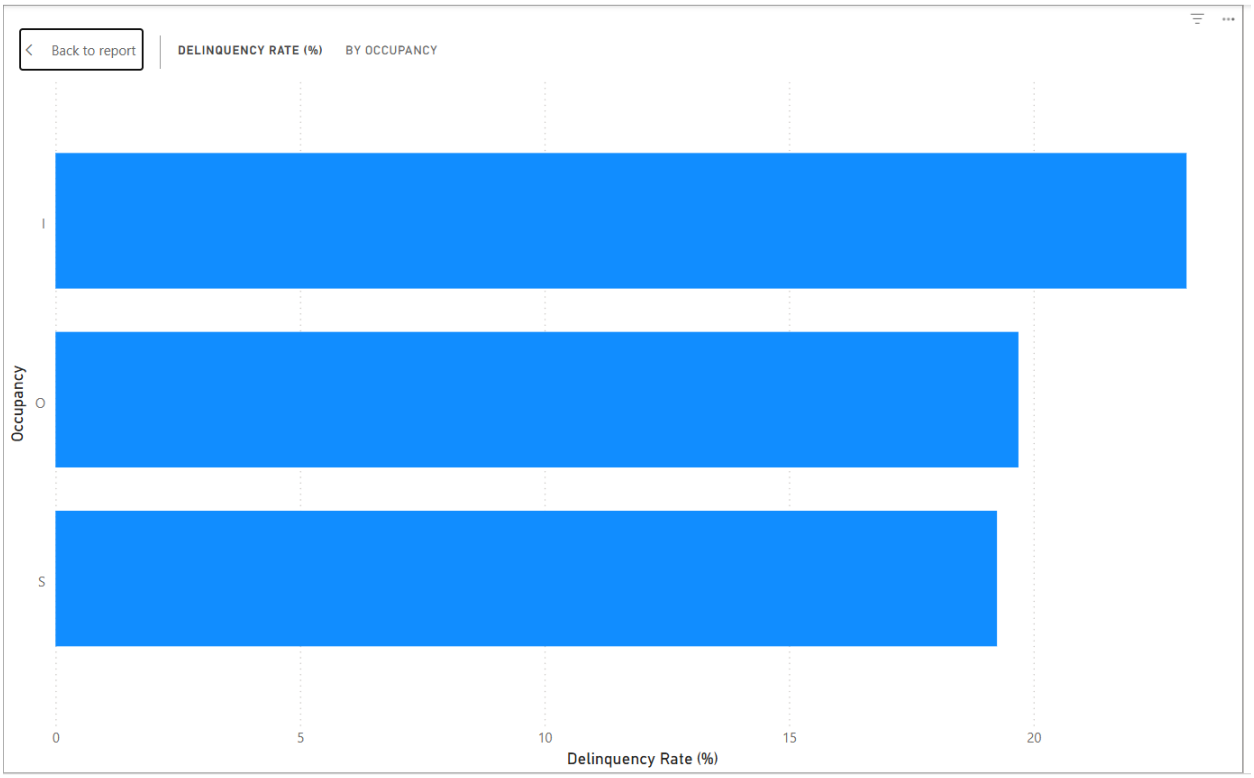
1. **Sum of NumBorrowers by FirstTimeHomebuyer**



- **Description**: Donut chart showing borrower counts segmented by first-time homebuyer status.
- **Findings**:
  - **N (Not First-Time)**: 304K borrowers (63.57%)
  - **X (Unknown)**: 129K borrowers (27.05%)
  - **Y (First-Time)**: 45K borrowers (9.39%)
- **Insight**: Majority of borrowers are repeat buyers. The small share of first-time buyers may indicate a mature borrower base.

---

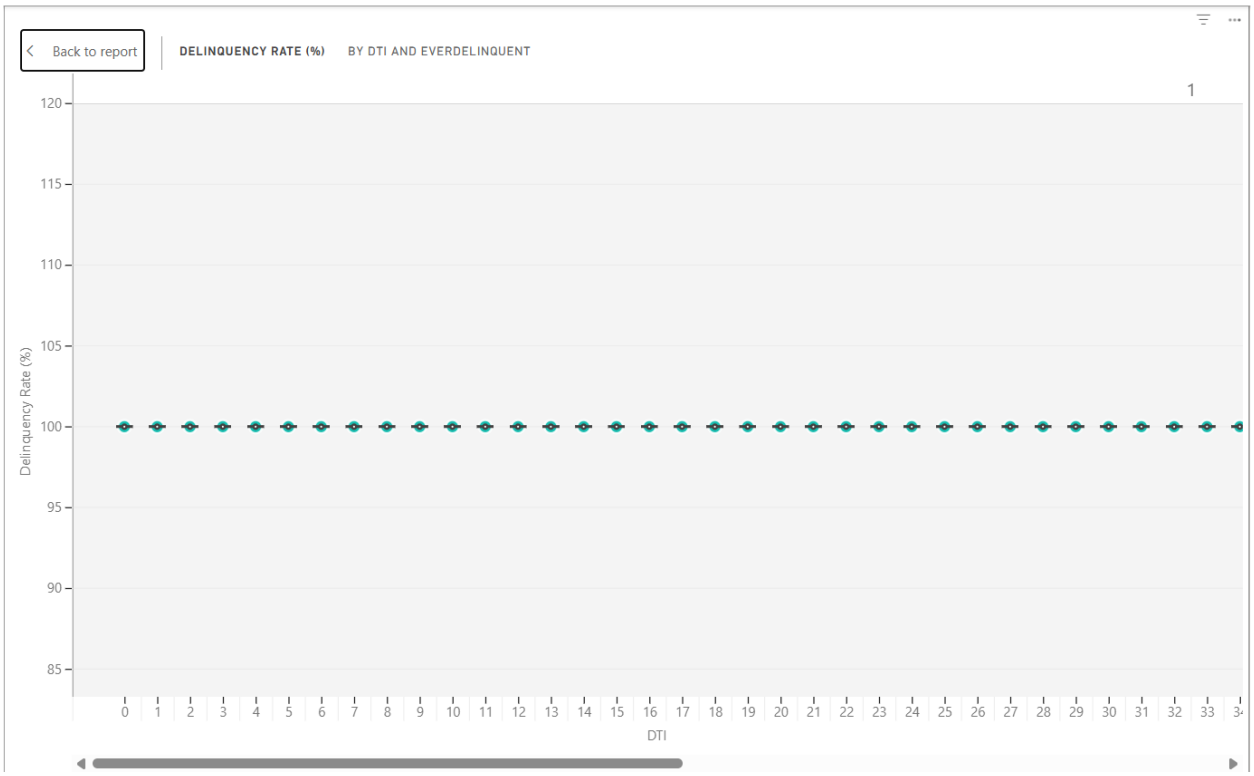
2. Delinquency Rate (%) by Occupancy



- **Description**: Bar chart comparing delinquency rates across occupancy types.
- **Findings**:
  - **I (Investor)**: Highest delinquency rate (~22%)
  - **O (Owner-Occupied)**: ~19%
  - **S (Second Home)**: ~18%
- **Insight**: Investor-owned properties carry the highest delinquency risk, possibly due to lower emotional attachment or prioritization of other assets.

---

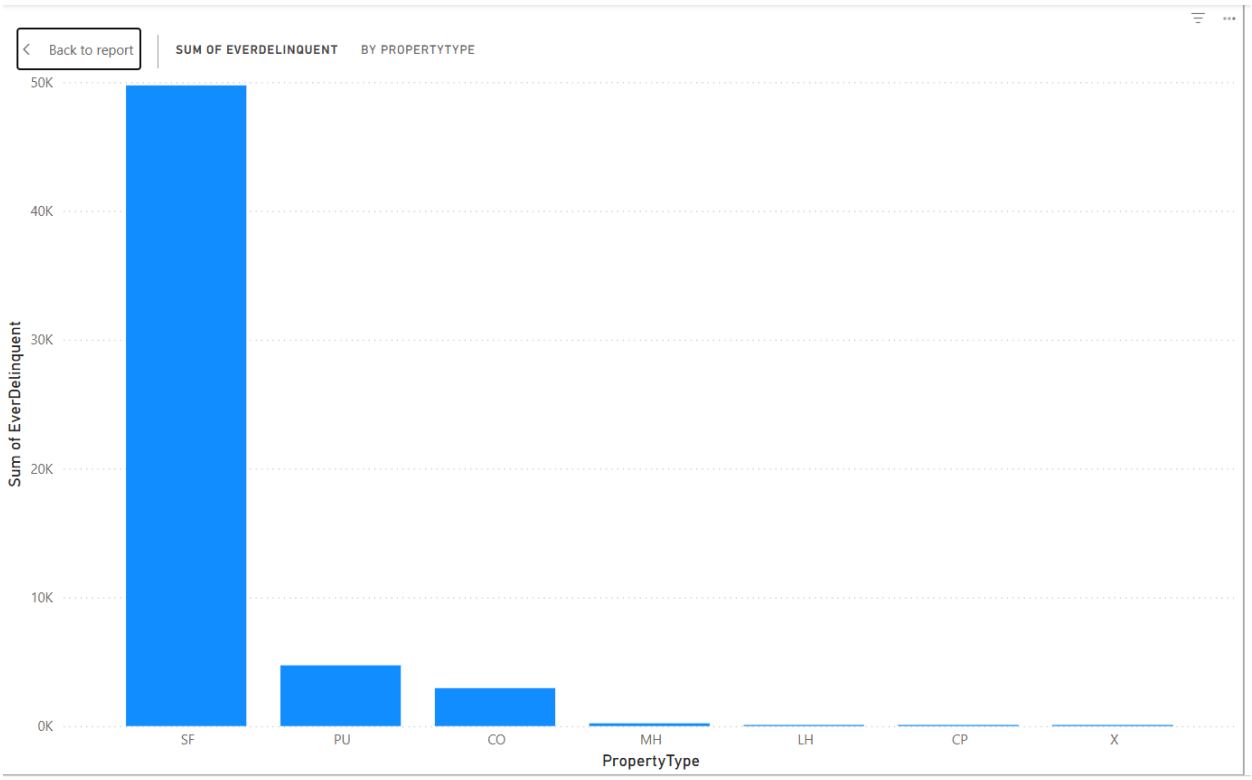
3. Delinquency Rate (%) by DTI and EverDelinquent



- **Description**: Scatter/line-style chart showing delinquency rate across Debt-to-Income (DTI) levels.
- **Findings**:
  - The plotted values appear almost flat (~100%) across DTI values, suggesting a potential data or scaling issue.
- **Insight**: As shown, DTI does not appear to drive delinquency differences, but the flat line suggests review of the measure's calculation.

---

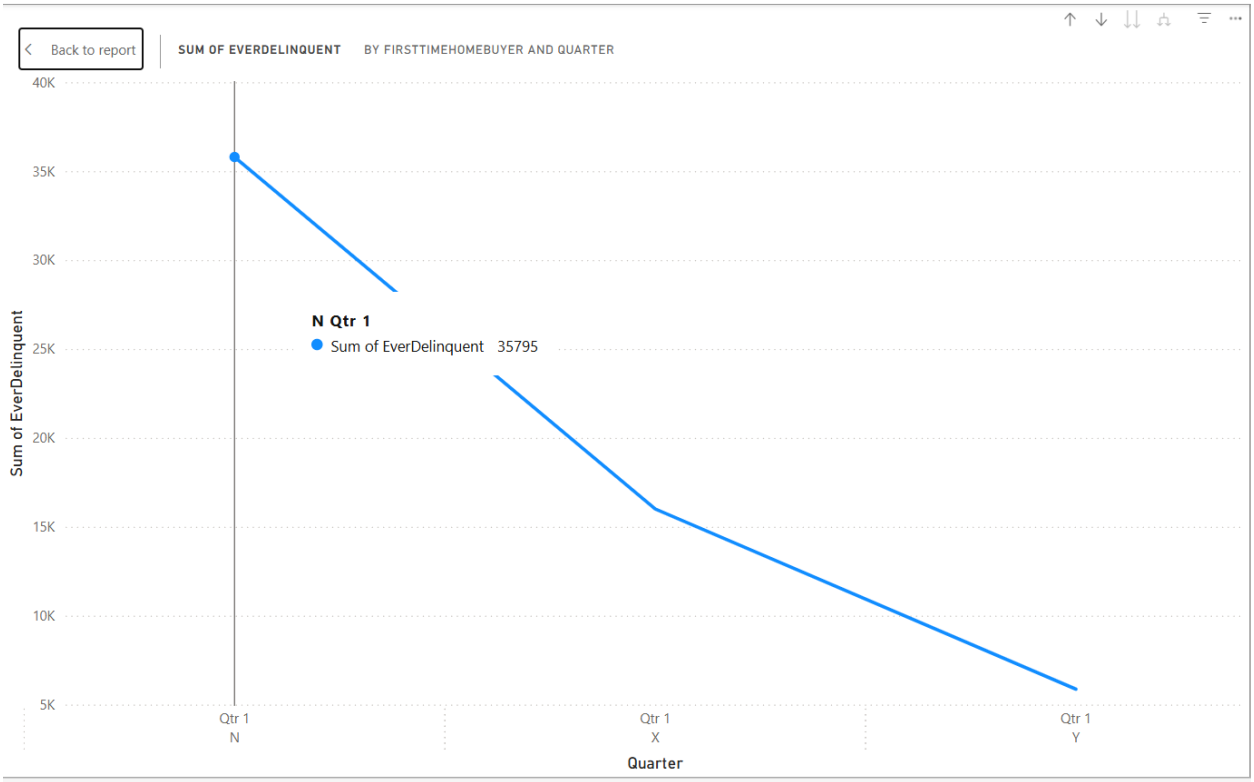
4. Sum of EverDelinquent by PropertyType



- **Description**: Bar chart showing delinquency counts across property types.
- **Findings**:
  - **SF (Single Family)** dominates with ~45K delinquencies.
  - Other property types (PU, CO, MH, LH, CP, X) show minimal delinquencies.
- **Insight**: Risk concentration is highest in single-family homes, likely reflecting their large share of the portfolio.

---

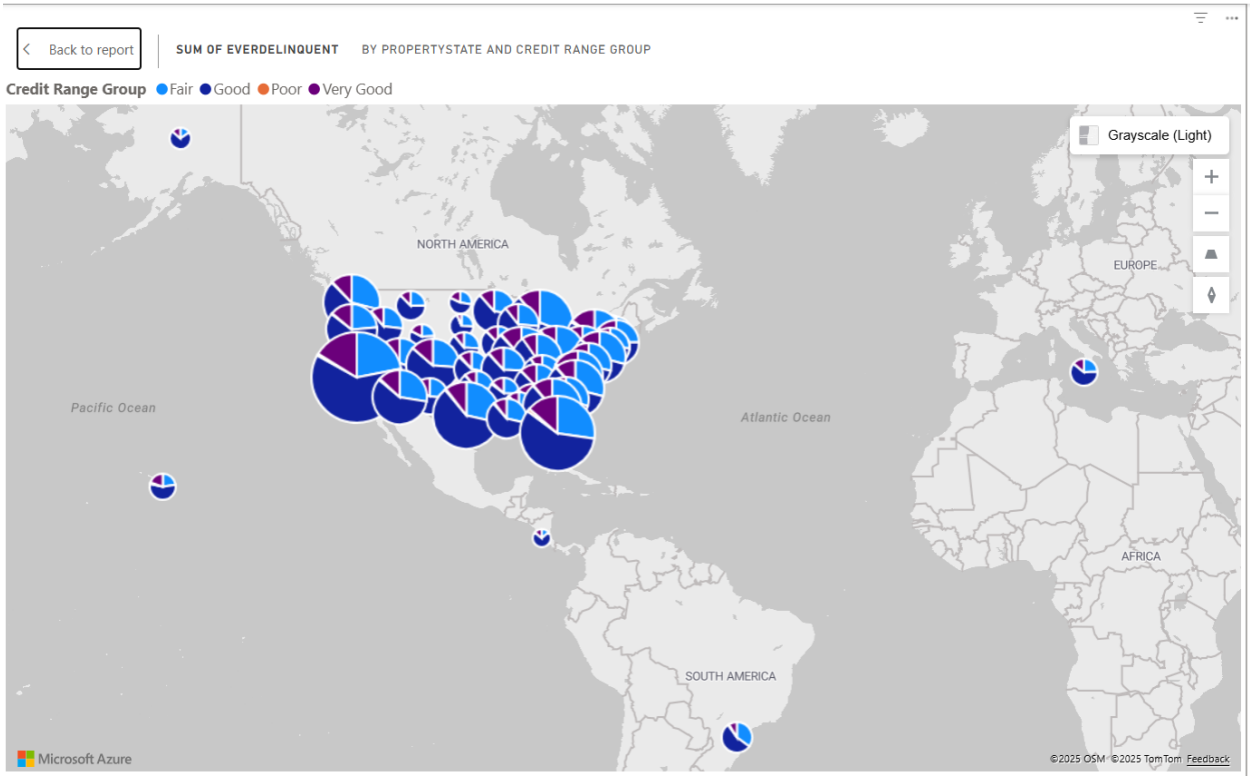
5. **Sum of EverDelinquent by FirstTimeHomebuyer and Quarter**



- **Description**: Line chart showing delinquency counts across quarters for first-time buyer status.
- **Findings**:
  - **N (Not First-Time)** shows the highest delinquency counts.
  - Delinquency counts drop progressively from N → X → Y.
- **Insight**: First-time buyers (Y) have fewer delinquencies in absolute terms, partly due to their smaller population share.

---

6. Sum of EverDelinquent by PropertyState and Credit Range Group



- **Description**: Map visualization showing delinquency counts by state, broken down by credit range.
- **Findings**:
  - Larger circles in southern and coastal states indicate higher concentrations of delinquency.
  - The mix of colors suggests delinquency spans all credit ranges, but **Fair** and **Good** credit borrowers are common in most states.
- **Insight**: Delinquency risk is geographically widespread but concentrated in high-loan-volume states.

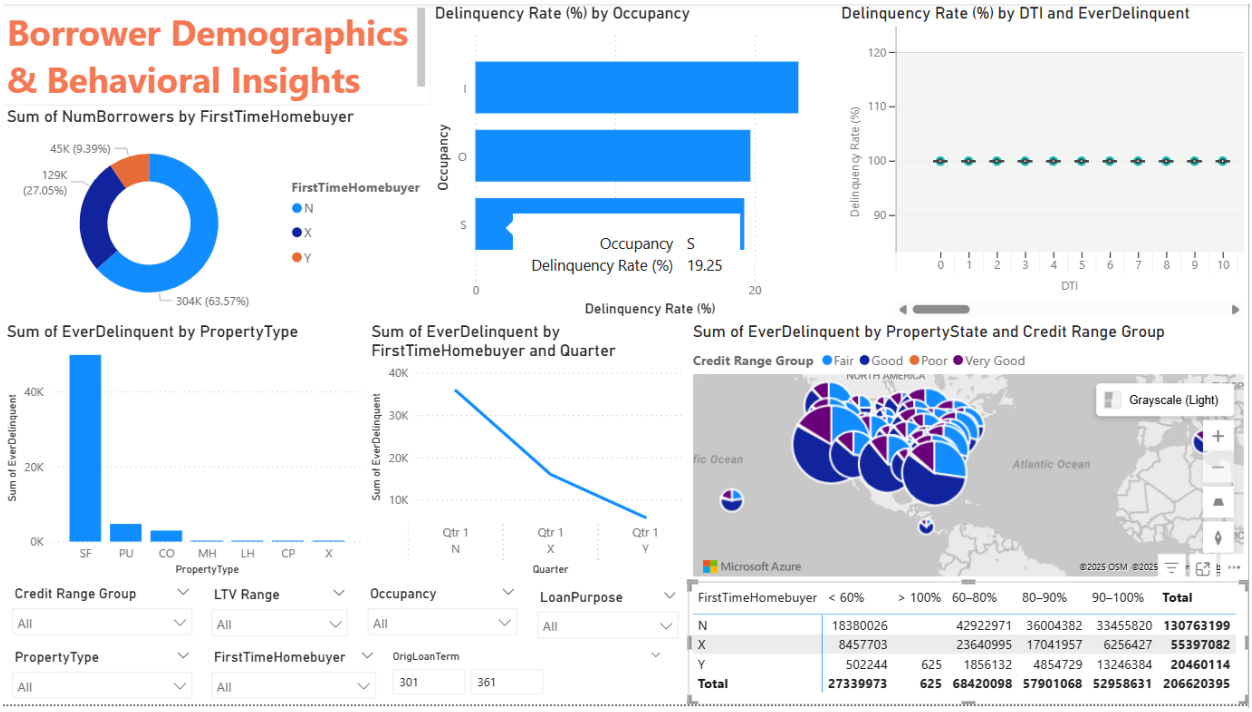
---

7. **Table: Sum of EverDelinquent by FirstTimeHomebuyer and LTV Range**

Back to report

FirstTimeHomebuyer	< 60%	> 100%	60–80%	80–90%	90–100%	**Total**
N	18380026		42922971	36004382	33455820	**130763199**
X	8457703		23640995	17041957	6256427	**55397082**
Y	502244	625	1856132	4854729	13246384	**20460114**
Total	**27339973**	**625**	**68420098**	**57901068**	**52958631**	**206620395**

- **Description**: Tabular breakdown showing delinquency counts by first-time buyer status and LTV bands.
- **Findings**:
  - Highest delinquency counts occur in the **80–90% LTV** range for **N** and **X** groups.
  - **First-Time (Y)** borrowers show much lower delinquency totals across all LTVs.
- **Insight**: Higher LTVs increase delinquency risk for repeat and unknown buyer categories; first-time buyers remain a smaller contributor.



Overall Conclusions

1. **Borrower Profile**: Most borrowers are not first-time buyers, but repeat buyers carry the largest share of delinquency volume.
2. **Occupancy Impact**: Investor-owned properties are more prone to delinquency than owner-occupied or second homes.
3. **Property Risk**: Single-family homes dominate delinquency counts, largely due to their portfolio share.
4. **LTV Influence**: Higher LTV ranges, especially 80–90%, correlate with elevated delinquency risk.
5. **Geographic Spread**: Delinquency is concentrated in certain high-loan-volume states, suggesting localized economic or housing market stress.
6. **First-Time Buyer Risk**: Despite being fewer in number, first-time buyers show proportionally lower delinquency counts — potentially due to stricter underwriting.
