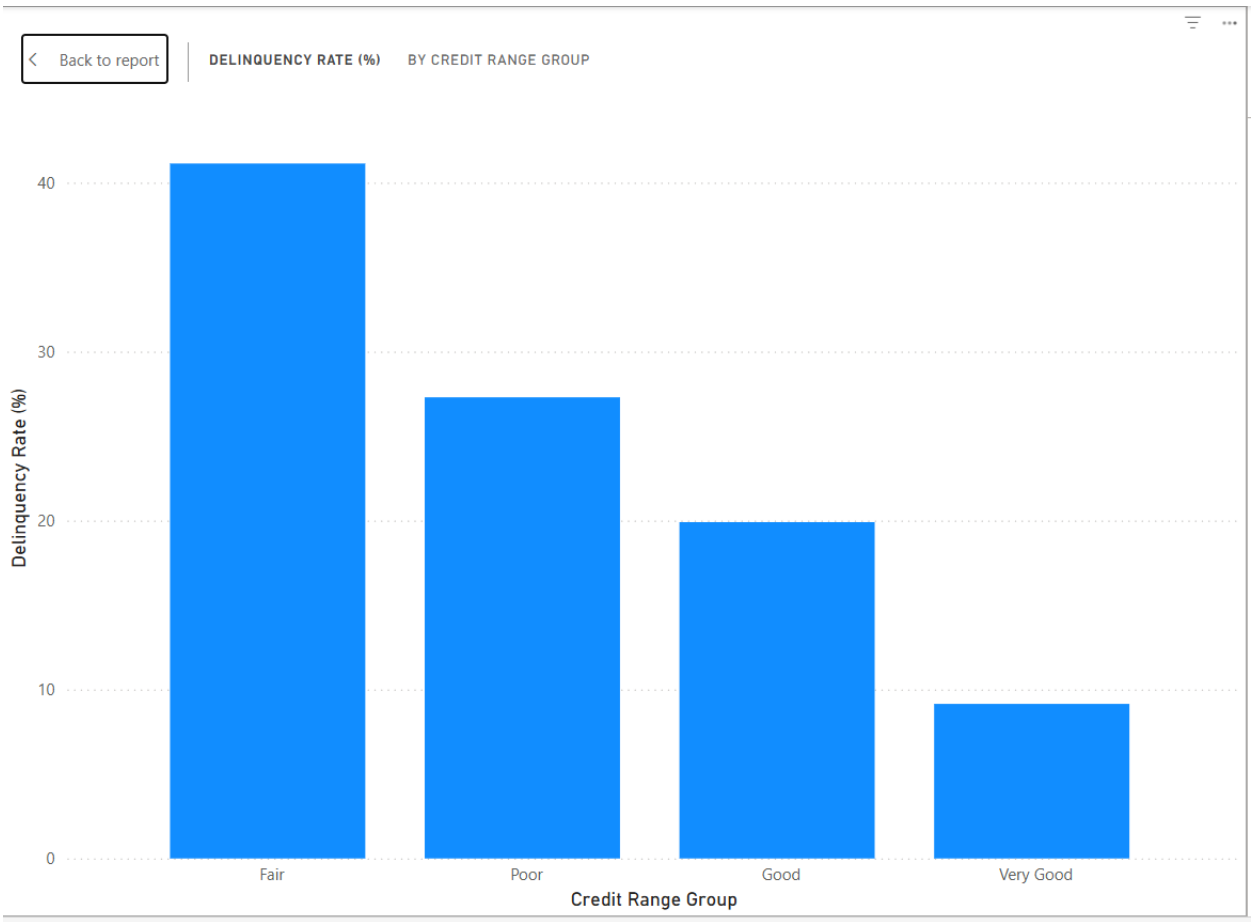
Dashboard 3: Credit Performance & Risk Monitoring

.

---

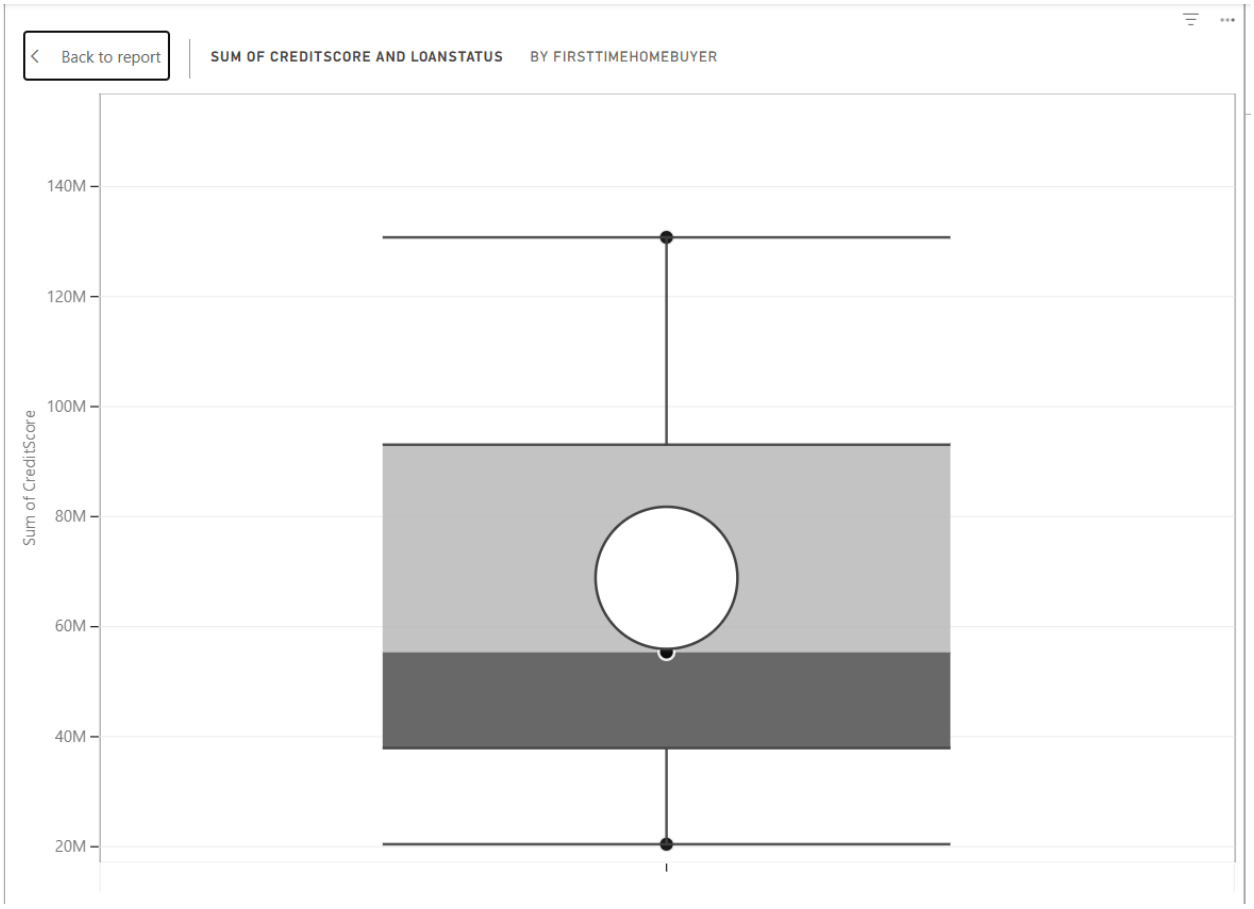
1. Delinquency Rate (%) by Credit Range Group



- **Chart Type**: Bar Chart
- **Insight**:
  - Borrowers in the **"Fair"** credit group show the **highest delinquency rate**, followed by **Poor**, then **Good** and **Very Good** groups.
- **Conclusion**: Delinquency is **inversely correlated** with credit quality. Risk is heavily concentrated in Fair and Poor bands. Lending strategy should restrict exposure or tighten terms in these groups.

---

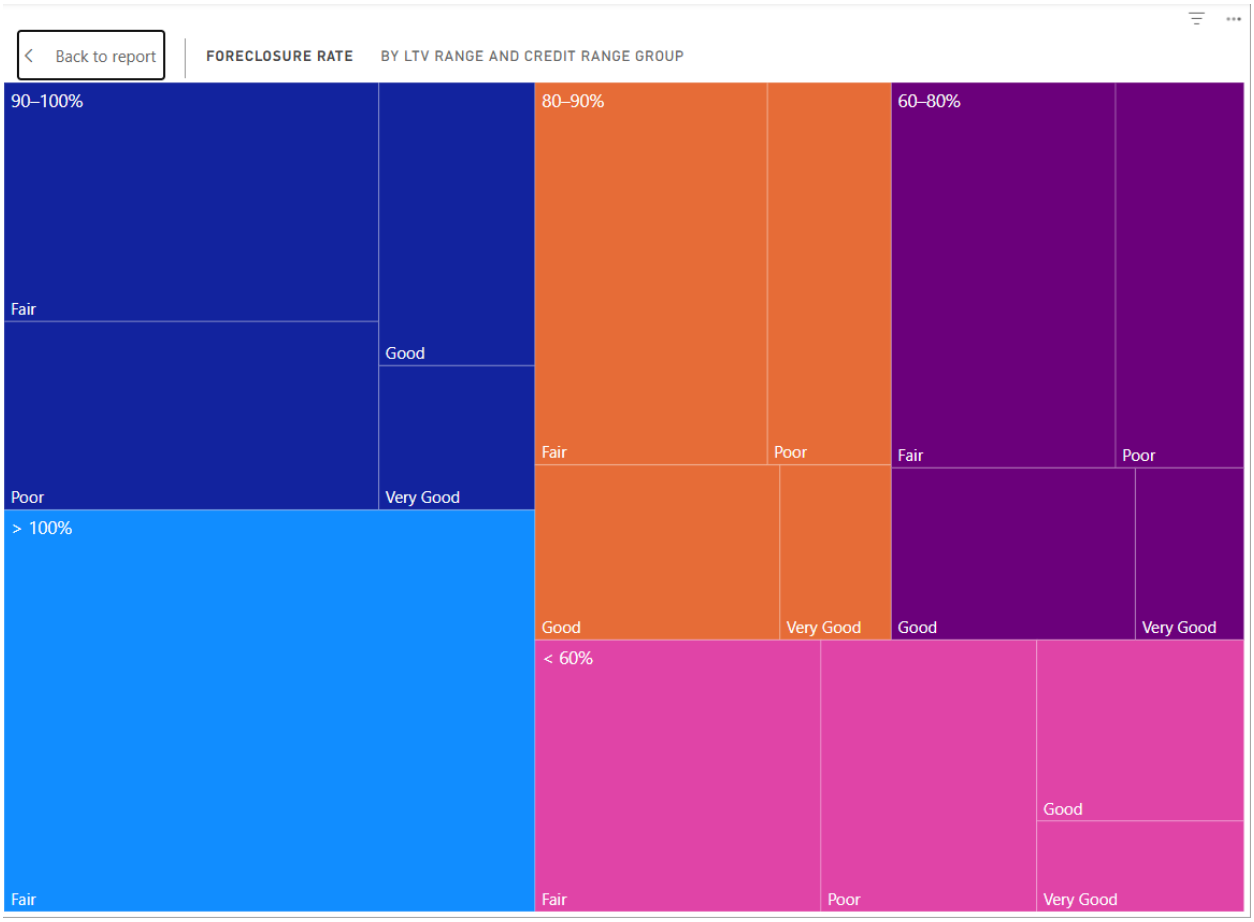
2. Sum of Credit Score and Loan Status by First-Time Homebuyer



- **Chart Type**: Box Plot
- **Insight**:
  - The distribution of credit scores for first-time homebuyers is **centered between 600 and 750**, but some low-score outliers exist.
  - **Loan status spread** is wide, meaning some first-time buyers may default even with average scores.
- **Conclusion**: First-time buyers show **higher score volatility**, which could increase loan performance unpredictability. Consider enhanced counseling or conservative underwriting.

---

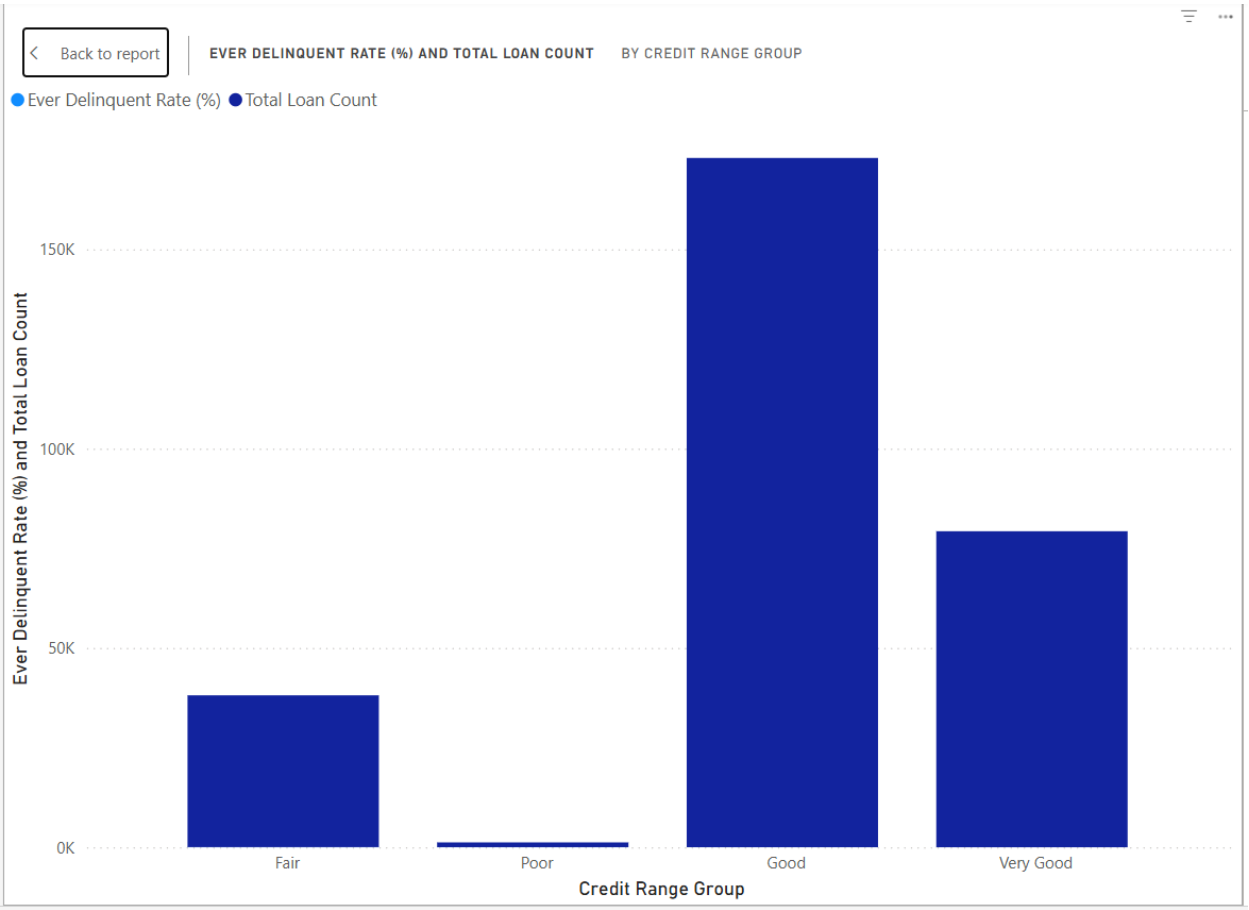
3. Foreclosure Rate by LTV Range and Credit Range Group



- **Chart Type**: Heatmap / Matrix
- **Insight**:
  - Foreclosure risk is **highest** for loans with **LTV > 100%** across **Fair** and **Poor** credit ranges.
  - Even **Very Good** borrowers show elevated foreclosure in high-LTV bands.
- **Conclusion**: High LTV magnifies foreclosure risk regardless of credit score. This underscores the need to cap LTVs or require mortgage insurance in those ranges.

---

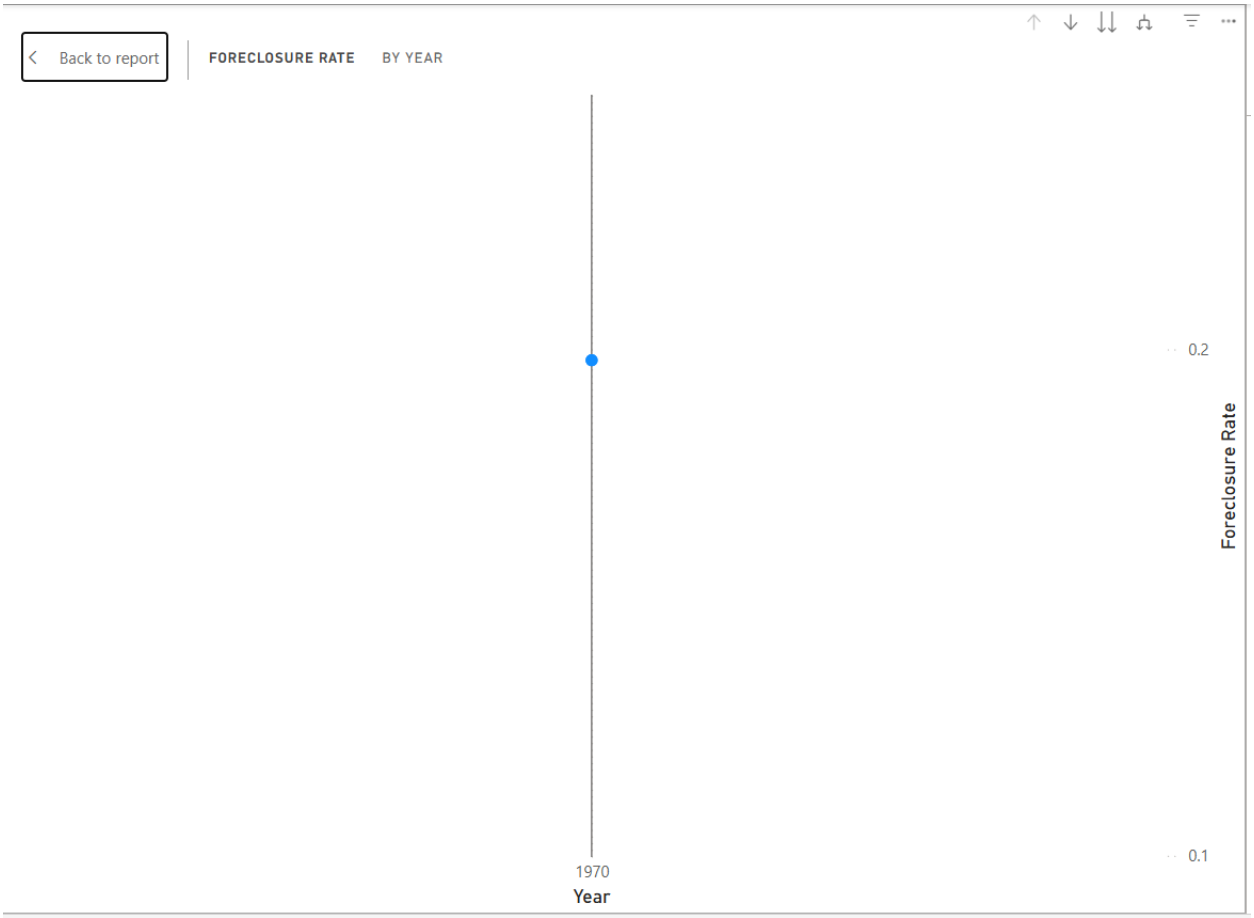
4. Ever Delinquent Rate (%) and Total Loan Count by Credit Range Group



- **Chart Type**: Dual-axis Column Chart
- **Insight**:
  - Despite **"Good" credit** borrowers having the **highest number of loans**, they still show a **notable delinquency rate**.
  - "Fair" and "Poor" groups have fewer loans, but higher risk.
- **Conclusion**: High-volume borrower segments like "Good" require close monitoring even if their average risk is lower — because of their **large impact on total portfolio risk**.

---

5. Foreclosure Rate by Year



- **Chart Type**: Scatter Plot
- **Insight**:
  - Only a **single point** is plotted (likely due to data quality issues).
- **Conclusion**: This visual appears incomplete or misconfigured. Suggest fixing or replacing with a trend over multiple years for meaningful time-based insights.

🎛️ Filters and Slicers Used in This Dashboard:

Filter	Description
PropertyState	Enables regional-level filtering to assess credit risk by geography
OrigUPB (Slider)	Allows segmentation of risk by original loan size
FirstTimeHomebuyer	Helps isolate performance of new home buyers
Credit Range Group	Filters performance by borrower credit quality
OrigLoanTerm	Allows focus on short-term (15 yrs) vs long-term (30 yrs) loans
LoanPurpose	Differentiates between purchase, refinance, and cash-out loans

This dashboard provides insights into the **credit health, delinquency behavior, foreclosure trends**, and how these vary across borrower credit ranges, loan types, and LTV bands. It uses key metrics like delinquency rate, foreclosure rate, and loan status distribution, segmented across key borrower demographics and risk dimensions
